DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ellen Bierman on 11/18/09.

The application has been amended as follows: Claim 1: A method in a computing system, comprising:

under control of the computing system,
receiving a print job that requests to print a set of electronic document pages that are available from a communication network;

breaking up the print job into a plurality of batches each having a plurality of electronic document pages that together form the set of electronic document pages;

before printing each batch of said print job, applying stamps to the electronic document pages of each said batch, such that stamps are applied to at least one batch while at least one already stamped batch of said print job is currently printing; and

under control of a server of the computing system, controlling the printing of said batches of said print job by separately sending said each batch having said respective stamps that have been applied to electronic document pages of said batch to a client terminal to be printed, while electronic document pages of other batches of said print job

Art Unit: 2625

that are awaiting to be printed are having said respective stamps applied, wherein all said batches of said print job are sent to said client terminal for printing on a same single printer of said client terminal.

Claim 29: A computer system comprising:

a means for receiving a print job that requests to print a set of electronic document pages that are available from a communication network;

a means for breaking up the print job into a plurality of batches each having a plurality of electronic document pages that together form the set of electronic document pages;

a means for applying, before printing each batch of said print job, stamps to the electronic document pages of each said batch, such that stamps are applied to at least one batch while at least one already stamped batch of said print job is currently printing; and

a means for controlling the printing of said batches of said print job by separately sending said each batch having said respective stamps that have been applied to electronic document pages of said batch to a client terminal to be printed, while electronic document pages of other batches of said print job that are awaiting to be printed are having said respective stamps applied, wherein all said batches of said print job are sent to said client terminal for printing on a same single printer of said client terminal.

Allowable Subject Matter

2. Claims 1-11 and 17-34 (renumbered as 1-29) are allowed.
3. The following is an examiner's statement of reasons for allowance: The present invention is directed to "use of a batch-printing technique to efficiently print high volumes of electronic documents from a network". Independent claims 1, 17, and 29 renumbered as 1, 12, and 24 respectively, identify the uniquely distinct features **inter alia "applying stamps to portions of a print job while other portions are sent to the printer and/or being printed"** as stated in applicants arguments dated 08/17/09 in paragraph 1 on page 12.

The prior art of record fails to anticipate or render the above underlined limitations obvious.

Dependent claims 2-11, 18-28, and 30-34 (renumbered as 2-11, 13-23, and 25-29, respectively) are also allowed due to its dependency on the allowed base claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
